Reliable & Efficient Test Practice Questions to Satisfy All Candidates

**Exam** : **NSE5\_FMG-6.0**

**Title** : Fortinet NSE 5 - FortiManager  
6.0

**Vendor** : Fortinet

**Version** : DEMO

**NO.1** In addition to the default ADOMs, an administrator has created a new ADOM named Training for FortiGate devices.

The administrator sent a device registration to FortiManager from a remote FortiGate. Which one of the following statements is true?

- A. The FortiManager administrator must add the unregistered device manually to the unregistered device manually to the Training ADOM using the Add Device wizard
- B. The FortiGate will be automatically added to the Training ADOM.
- C. The FortiGate will be added automatically to the default ADOM named FortiGate.
- D. By default, the unregistered FortiGate will appear in the root ADOM.

**Answer:** D

**NO.2** What does a policy package status of Modified indicate?

- A. Policy configuration has been changed on a managed device and changes have not yet been imported into FortiManager
- B. Policy package configuration has been changed on FortiManager and changes have not yet been installed on the managed device.
- C. The policy package was never imported after a device was registered on FortiManager
- D. FortiManager is unable to determine the policy package status

**Answer:** B

**NO.3** An administrator runs the reload failure command: `diagnose test deploymanager reload config <deviceid>` on FortiManager. What does this command do?

- A. It installs the latest configuration on the specified FortiGate and updates the revision history database.
- B. It compares and provides differences in configuration on FortiManager with the current running configuration of the specified FortiGate.
- C. It downloads the latest configuration from the specified FortiGate and performs a reload operation on the device database.
- D. It installs the provisioning template configuration on the specified FortiGate.

**Answer:** C

**NO.4** An administrator would like to create an SD-WAN using central management. What steps does the administrator need to perform to create an SD-WAN using central management?

- A. Enable SD-WAN central management in the ADOM, add member interfaces, create a static route and SD-WAN firewall policies.
- B. You must specify a gateway address when you create a default static route
- C. Remove all the interface references such as routes or policies
- D. First create an SD-WAN firewall policy, add member interfaces to the SD-WAN template and create a static route

**Answer:** A
